

Flying Hills

Powder Coatings, Industrial Coatings and Automotive & Specialty Coatings R&D Center

Our coatings are sold under two global brands: Interpon® and Resicoat®. Powder coatings can be used in a wide variety of applications, from window frames, automotive components and pipes, to radiators, fences, metal furniture, and even wood, glass and plastic. They are available in a huge variety of colors, textures and finishes – including high gloss, matt, metallic, anodized and chrome effects. They contain no VOCs, and overspray can be reclaimed, making them one of the most sustainable coating options.

History

- 1955** Site established – Polymer Corp
- 1986** Acquired by Morton Thiokol
- 1999** Acquired by Rohm and Haas
- 2009** Acquired by Dow
- 2010** Acquired by AkzoNobel

Flying Hills Today

Site headcount: 35 employees

Laboratory: 19,000 SF

Functions: Development/Technical

Activities:

New product development; Color matching and developing color collections; Problem solving, compliant resolution, product enhancements; Analytical and Environmental testing

Safety:

Time without “a lost time injury” - more than 12000 days

Time without “a recordable injury” - more than 2700 days

VPP Star certification - since 2004
